

KSP to Mars mod-pack installer instructions

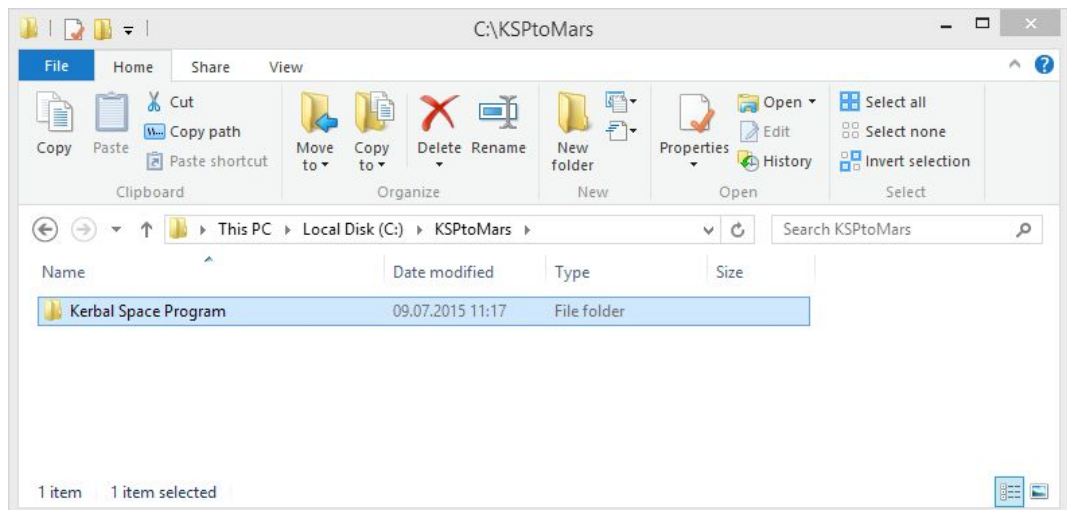

An example how to install the mod in Windows. Adapt each step accordingly for other platforms.

Step 1 Create a copy of the KerbalSpaceProgram (v1.0.4) folder. This is going to be our KSPtoMars installation. Let us call the location of the KSPtoMars installation [PathToKSPtoMarsInstall]

If you are using steam you can find the folder here

Let us copy it to e.g. C:\KSPtoMars. In this example, our [PathToKSPtoMarsInstall] is “C:\KSPtoMars\Kerbal Space Program”.

Step 2

Download the **most recent** [mod installer for your platform](#)

Pre-release

4.0.0

Source code (tar.gz)	

Edit

Step 3

Unpack the modscript and note the location. Let us call the location [PathToModscript]

For convenience and demonstration purposes I have unpacked the zip into the C:\KSPtoMars folder.

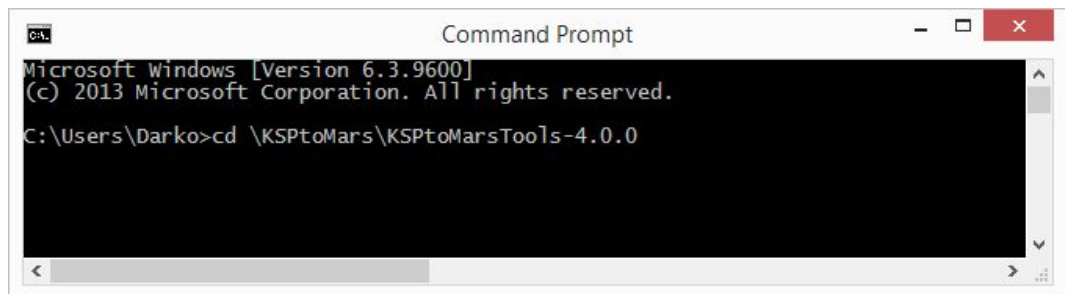

In this example our [PathToModscript] is "C:\KSPtoMars\KSPtoMarsTools-4.0.0".

Step 4 Open a terminal, shell, command prompt or however you call it on your platform :)

As an example for Windows:

- Press the Start Button
- Typing cmd
- Select Command Prompt

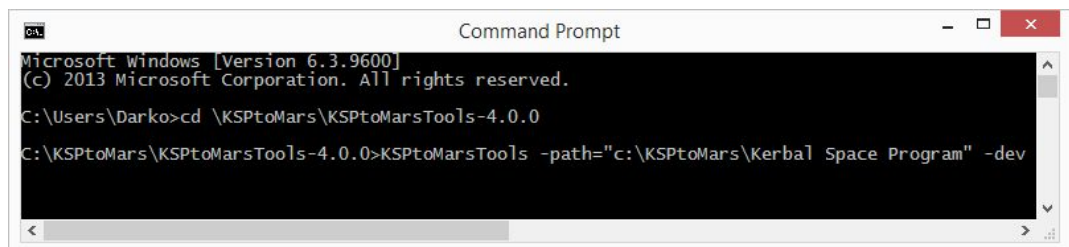

Step 5 Go to the location where you extracted the mod script in Step 3 by typing
cd "[PathToModscript]"
and press Enter. Keep the quote sign around your path.
For our example this would be
cd "C:\KSPtoMars\KSPtoMarsTools-4.0.0"

```
Command Prompt
Microsoft Windows [Version 6.3.9600]
(c) 2013 Microsoft Corporation. All rights reserved.

C:\Users\Darko>cd \KSPtoMars\KSPtoMarsTools-4.0.0
```

Step 6 Execute the script by typing
[modpack] -path="[PathToKSPtoMarsInstall]" -dev
and pressing Enter.
For our example this would be
KSPtoMarsTools -path="c:\KSPtoMars\Kerbal Space Program" -dev

```
Command Prompt
Microsoft Windows [Version 6.3.9600]
(c) 2013 Microsoft Corporation. All rights reserved.

C:\Users\Darko>cd \KSPtoMars\KSPtoMarsTools-4.0.0
C:\KSPtoMars\KSPtoMarsTools-4.0.0>KSPtoMarsTools -path="c:\KSPtoMars\Kerbal Space Program" -dev
```

Step 7 Wait until the installation is complete and you are finished. You can close the console
